EVERNORTH MEDICAL DRUG MANAGEMENT

Flexible support to minimize waste and maximize savings across pharmacy and medical benefits

Lowering the cost of care for chronic conditions, while still improving quality and outcomes, can seem like an impossible balance to strike.

With ever-increasing prevalence of chronic conditions, specialty drug use, complexity and fragmentation, finding opportunities to redirect wasteful spend under the medical benefit can be a challenge.

Most plans' protection against sky-high specialty drug spend ends after prior authorization. Our data shows that plans with utilization management, but no payment integrity or dose management protection spend an estimated **$5.99 PMPM more** than plans that validate claims prior to payment.[1]

Future drug approvals could create a tsunami of specialty spend—is your plan prepared for impact?

40%

of specialty drug spend occurs on the medical benefit, which will only continue to increase as new drugs are approved.[2]

Leverage powerful claims data and deep clinical expertise to eliminate wasteful spend

Evernorth's flexible Medical Drug Management solutions can help your plan save on high-cost specialty therapies by evaluating medical necessity for each claim and steering members to the most clinically appropriate care.

We have delivered savings on average of $8 PMPM[3]

Additional savings opportunities include:

$100

PMPY projected savings for commercial plans[4]

$23K

Average savings for each site of care redirection[5]

$27M

Average annual savings from clinical protocols to reduce waste and ensure therapy appropriateness[6]
