

Evernorth Care Enablement

Facilitating smooth transitions of care to the home, optimizing outcomes and costs

Members navigating acute and post-acute care (PAC) may receive care across many different settings and from multiple provider teams.

More and more, evolutions in health care have allowed PAC to shift to members' homes. But as your members recover at home from injury or illness, they'll continue to need skilled support coordinating and managing a care plan that leads to optimal health outcomes.

SUPPORT FOR ALL LINES OF BUSINESS

From Medicare Advantage, Medicaid, Dual Eligible, Exchange and Commercial, we offer multiple pricing and risk models to drive savings for our 30+ health plan clients.

Evernorth's Care Enablement solutions help members to navigate care effectively and confidently to achieve their health goals in any setting.

With expertise in helping payer clients manage total medical costs tied to episodes of care, we deliver savings across our solutions by:

Providing evidence-based clinical guidance and reviewing appropriateness of care

Determining the right level and sites of service within curated networks

Coordinating transitions to the home setting and preventing readmission to facilities

Choose between tailored solutions

Our areas of expertise can be leveraged alone or combined to deliver more precise, connected and impactful clinical interventions for your members:

Comprehensive Health Assessments:

Covering a range of health plan priorities with in-home risk screenings to engage, assess and educate—connecting members to the plan benefits, services and local resources they need.

Post-Acute Care:

Ensuring patients in skilled nursing, long-term acute care and inpatient rehabilitation facilities receive medically necessary care based on evidence-based guidelines.

Transitions of Care:

Identifying and managing medical, behavioral, functional, social and pharmacy risk factors that could lead to readmission for patients returning home after acute or post-acute episode.

Home Health:

Coordinating care delivery with skilled nurses and therapists, managing utilization to ensure members stay on track with quality and affordable care.

Durable Medical Equipment (DME):

Utilization management and coordination for patients using DME to improve outcomes and uncover better savings.

Sleep Management:

End-to-end support following episodes of care for sleep apnea patients to manage ongoing compliance with treatment.
